(54) Title: GLANS-STRIPPER APPARATUS TO HOLD THE TUCKED UP FORESKIN AT THE ROOT OF THE ERECT PENIS

(57) Abstract: The Glans-stripper provides a naked glans during sex by holding the tucked up foreskin at the root of the erection leaving the hands free for other use. The more sensitive inside layer of the foreskin will be stretched outwardly all over the erection and the completely naked glans will be stretched out by pulling its skin tight with its bridle. If wanted the Glans-stripper can easily be constructed by the consumer himself using the loose parts. A do-it yourself kit can be made out of a combination of these loose parts. Loose parts like a spherical shaped and headlike form K(-) made out of two hinging parts with a clasp to fasten them up. A length of about 15 meters of flat cotton (sports) shoelace material rolled up around a piece of carton. Elastic ribbon made out of two pieces of elastic ribbon connected to each other by a thin but very strong thread making thin but very strong separations between interruptions of a buttonhole long. Small tube like forms with a cut from one end to the other that can be glued around the ends of the shoe-lace material to prevent them from raveling.
